Intake of scrapped vehicles

General information:
From the different vehicle categories, including e-bikes, motorbikes/motor scooters, cars, lorries and trailers, the information here focuses on cars and lorries.

We distinguish mainly between three types of vehicle:
vehicles with a *combustion engine* (petrol, diesel, gas), *hybrid vehicles* (combination of electric drive and traditional combustion engine) and purely *electric vehicles*.
Our company specialises in **vehicles with a combustion engine.**

Intake requirements for vehicles with a combustion engine:
Intake is possible free of charge where the following conditions are met:
- Presentation of vehicle documentation nullified by a road traffic licensing authority
- Prior removal of all fluids from the vehicle (must contain no operating fluids or lubricants such as fuel, oils, brake fluid, coolant, screen wash, etc.)
- Prior removal of wheels
- Must contain no non-vehicular materials (waste, etc.)
- Where a vehicle has an integrated gas tank, this must be evidenced as empty and depressurised (declared on delivery).

Where a vehicle is delivered and does not meet the above criteria, the appropriate costs and fees will be charged.

Please note:
For intake of *hybrid or electric vehicles* (cars), please contact our trading team.
With *e-bikes*, please make sure that battery cells have already been removed and disposed of separately (risk of explosion and fire). In cases of non-compliance and should an incident occur, costs and fees will be charged as applicable. If you have any questions please contact our trading team.

Disclaimer of liability relating to transportation equipment used by the customer:
The Wiederkehr Group is not liable for damage to transportation equipment used by the customer such as towing vehicles and trailers. In all other respects the T&Cs apply.
